

Claims 11-13 have been amended to recite a "telephone call". This new limitation will require a new rejection (e.g., a 102 rejection based on Farris, U.S. Patent 6,574,216).

Applicant argues that Farris "does not provide means for a caller to initiate rerouting of a call from the caller's telephone without terminating the call". As a matter of fact, Examiner would like to bring to applicant's attention that Farris teaches pressing the "*" digit on the caller's telephone 11 during an economical Internet call will switch the call from Internet 50 to the PSTN 10 to improve the voice quality. The Internet may be selected when the caller dials a code such as *82 or based on the caller's routing criteria in his/her CPR (col. 9, lines 35-58).
